INDICES OF AGRICULTURAL PRODUCTION  
IN WESTERN EUROPE

1950-68

Europe and Soviet Union Branch  
Foreign Regional Analysis Division  
Economic Research Service

INTRODUCTORY NOTES

Western Europe contains about 335 million people. With income and living standards among the world's highest, the population of the region consumes a large share of the world's food and fiber. A large portion of the world's supply of temperate commodities is produced in the region. But a very high man-land ratio makes the region a large net importer of food and fiber. Assessment of the agricultural and food situation in this area of the world and its development over time is critical to a knowledge of the world situation. The indices presented in this publication are a part of the continuing effort of the Economic Research Service to assess the world agricultural situation. This is the first time that detailed indices for this part of the world have been published by the U.S. Department of Agriculture, although indices of aggregate output have been published for several years. <sup>1/</sup>

The country indices were calculated by Laspeyre's based-weighted aggregative formula. In order to facilitate intra-European comparisons, the weights are estimates of 1957-59 average prices received by West European farmers, expressed in dollars per metric ton. Regional indices were computed from sums of country aggregates.

Only those agricultural products of considerable significance in the respective countries are included. The year under which production data are listed is the year during which the bulk of the harvest occurred.

A constant percentage of each country's aggregate value of livestock output has been subtracted to avoid double counting of feed and the livestock products produced from it. This constant fraction is the estimated relationship between the value of livestock products and that of feed derived from crops calculated in Food Balances for 16 Countries of Western Europe, 1959-61, ERS-Foreign 87, Economic Research Service, U.S. Department of Agriculture, August 1964.

---

<sup>1/</sup> The Agricultural Situation in Western Europe: Review of 1968 and Outlook for 1969. U.S. Dept. Agr., ERS-Foreign 258, March 1969. The Europe and Soviet Union Agricultural Situation: Review of 1967 and Outlook for 1968. U.S. Dept. Agr., ERS-Foreign 220, April 1968. The Europe and Soviet Union Agricultural Situation: Review of 1966 and Outlook for 1967. U.S. Dept. Agr., ERS-Foreign 185, May 1967.

Most production data are from publications of foreign governments and international organizations such as FAO, OECD, and the European Community. In a few cases, when other data were unavailable, ERS analysts have made estimates. Data for 1968 are preliminary.

Indices of food production were computed from aggregates for edible products contributing energy to the human diet, regardless of the level of actual consumption in the producing country or region. Per capita indices were computed by dividing the agricultural or food indices by appropriate indices of population (1958=100).

The production aggregates showing value in million dollars at constant 1957-59 West European producer prices should not be confused with gross value of agricultural production, gross sales by farmers, or agriculture's contribution to gross domestic product. Trends in these aggregates should, however, roughly parallel trends in the other measurements mentioned. The aggregates permit year-to-year comparisons of the level of output in the various countries and the regions.

These data were prepared partially in support of the USDA research project "Analysis of Demand Prospects for Agricultural Products of the Less-Developed Countries," sponsored by the Agency for International Development.

Comments or suggestions for improving this report are invited.
